Our Online Retail Store consists of three options
1. Admin
2. Seller
3. Customer

Admin:
First, the admin have to sign in by entering the username, password and id to access the options

Admin has multiple options:
1. Approve Product
   When seller sells the product it gets added to the database but the admin have to approve it to be available for the customer to buy

2. UnApprove Product
   Similarly the admin can unapprove the product and the product will not be available for the customer to buy

3. Get Monthly Number of Orders
   Admin can check the number of orders coming monthly on the store through this option. It also gives the total number of orders year-wise

4. Get total approved Products
   Admin can check the products that are approved and their approved quantities through it and it also gives the total approved products available on the retail store.

5. Get total sales of each product sold by each seller and grand total of total sales
   Admin can check the total sales of each product for each seller and also the total sales made on the store.

6. Get Monthly Sales
   Admin can check the monthly sales made on the retail store and also the total sales year-wise

Seller:
Seller has 2 options , one is to signUp and the other is the Login
New Seller can signup by entering the necessary information with unique username
Already existing seller can login and can access the options avaiable

Seller has multiple Options:

1. Sell Product
   Seller can sell the product on the store by adding the necessary information
   about the product but whether the product will be available for buying for the
   customer depends on if the admin approves the product or not

2. Add Quantity
   Seller can add the quantity of the product which he is selling through this option

3. Update Price
   Seller can update the price of the product being sold by the seller but the admin
can unapprove the product if the price is increased drastically

Customer:

Customer has 2 options, one is to SignUp and the other is to LogIn
New Customer can SignUp by adding the necessary information with unique username
Already existing customer can login to the store by using the username and password
and can access the options available

Customer have multiple options:

1. Explore Products
   Customer can explore the products that are available on the retail store through
   this option

2. Search for product
   Customer can search if the particular product is available on the store

3. Add to Cart
   Customer can add a particular product to the cart by using the ID of the product and how much quantity he/she wants to add
   This decreases the equivalent quantity from the stock available on the store

4. See Cart Items
   Customer can view the cart and can check the products which are added to the cart along with the quantity of each

5. Remove from Cart
   Customers can remove a particular product from the cart through this option
   The quantity that was in the cart of this product also gets added to the total stock of the product available on the store

6. Place Order
   Customer can finally place the order which consists of all the items in the cart
   After placing the order, the cart is restored back to 0
   Customer gets asked for the mode of payment and the expected delivery date is around 7 days after the date of order
